

Variable Message Signs

The Variable Message Signs (VMS) are trailer-mounted, and self-powered via solar panels and built-in battery bank. With inbuilt satellite GPS tracking our VMS boards can be used for traffic management on road projects, or as large size advertising message sign.

The 5 colour VMS at Bylsma Hire is the largest model available with a 2600mm x 1600mm viewable area screen.

Solar Signs

The VMS range are all *solar powered signs*. The solar tilt/rotate system developed by Data Signs allows the operator to tilt and rotate the solar array to the optimal angle and heading to capture the most sunlight each day. The raise (tilt) and rotate controls are located in the VMS Control box for ease of use. By rotating the bottom edge of the solar array to face due north and tilting the solar array slightly for summer and more for the winter season, the amount of sunlight hitting the solar array each day increases and so keeps the battery bank fully charged.

If you think that our VMS board would be perfect for your next job, project or advertising needs then why not contact us at Bylsma Hire to make a booking, or simply to get a demonstration of what the signs can do.
